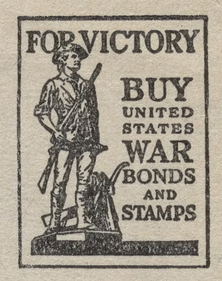
# UNITED STATES DEPARTMENT OF AGRICULTURE

AGRICULTURAL RESEARCH ADMINISTRATION

BUREAU OF PLANT INDUSTRY, SOILS, AND
AGRICULTURAL ENGINEERING



DIVISION OF
MYCOLOGY AND DISEASE SURVEY

BUREAU OF PLANT INDUSTRY STATION
BELTSVILLE, MARYLAND

October 19, 1945

To: F. R. Fosberg

From: J. A. Stevenson, Senior Mycologist in Charge
Mycology and Disease Survey

Subject: Identification of Collections by N. C. Fassett

I have named the following Fassett collections. The remainder of the series consists of lichens, which have been placed with our undetermined lichen collections against the happy day when we have a specialist in this group.

25116 Fusarium heterosporum Naes. on Setaria spikelets.
25278 Guepinia fissa Berk.
25280 Lachnocladium brasiliense Lev.
25292 Cora pavonia (WEb.) E. Fr.
25408 Dictyophora indusiata (Ventenat ex Pers.) Desv.
25570 Dictyonema irpicinum Mont.
25571 Dictyonema irpicinum Mont.
25572 Dictyonema irpicinum Mont.
25962 Chiodecton sanguineum (Sw.) Vainio

7 = delivered

6 copies for F.E.A.
>National arboretum
>E.P. Killip, Smithsonian
>F.R. Forberg
(filed in his personal folder)

## Colombian Cinchona Mission
## Plant Collection Number List

Harold St. John 1944

Note: Blank spaces in the list following full data indicate ditto marks or that the data is the same as for the previous entry. Common names are in quotes.

| Number | Name | Locality | Date |
|---|---|---|---|
| 20501 | Ruppia | Paiba, Boyacá | May 7, 1944 |
| 20502 | Solanum | Apulo, Rio Bogota, Cundinamarca | June 12, 1944 |
| 20503 | Ruellia tuberosa | | |
| 20504 | Ruellia obtusa | | |
| 20505 | Solanum crotonifolium | | |
| 20506 | Tournefortia hirsutissima | | |
| 20507 | Guazuma ulmifolia var. tomentosa | | |
| 20508 | Capparis odorotissima | Apulo, Rio Apulo, Cundinamarca | June 13, 1944 |
| 20509 | Casearia nitida | | |
| 20510 | Croton leptostachys | | |
| 20511 | Malpighia glabra | | |
| 20512 | Cassia | Ubaque, Cundinamarca, | June 17, 1944 |
| 20513 | Cassia | Choachí, Cundinamarca, | June 17, 1944. |
| 20514 | Cavendishia cordifolia | Páramo de Cruz Verde, 15 Km. S. of Bogotá, Cundinamarca | June 17, 1944 |
| 20515 | Macleania rupestris | | |
| 20516 | Carica candaramarcensis | Bogotá, Cundinamarca | June 22, 1944 |
| 20517 | Cuphea dipetala | 1 Km. N. of Sibaté, Cundinamarca | June 23, 1944 |
| 20518 | Monina | | |
| 20519 | Dodonaea viscosa | | |
| 20520 | Peperomia | | |
| 20521 | Lupinus | | |
| 20522 | Nertera granatensis | | |
| 20523 | Acanthaceae Besleria? | | |
| 20524 | Begonia magnifica | | |
| 20525 | Gunnera scabra | | |
| 20526 | Jamesonia | | |
| 20527 | Liabum | | |
| 20528 | Fuchsia | | |
| 20529 | Columnea | | |
| 20530 | Palicourea | on road, 15 Km. N. E. of Fusugasugá, Rio Subiaba, Cordillera Oriental, Cundinamarca | June 23, 1944 |
| 20531 | Palicourea | | |
| 20532 | Palicourea | | |
| 20533 | Ciparouna | | |
| 20534 | Carica candaramarcensis | Bogotá, Cundinamarca | June 24, 1944 |
| 20535 | Compositae | San Cristobal, Bogotá, Cundinamarca, | June 25, 1944. |
| 20536 | Stachytarpheta | 1 Km. N. of Cite, Cordillera Oriental, Santander | June 28, 1944. |
| 20537 | Melastomaceae | 13 Km. S. of Oiba, Cordillera Oriental Santander, | June 28, 1944 |

FOREIGN ECONOMIC ADMINISTRATION

20538 Cassia — 18 Km. S. of Socorro, Cordillera Oriental, Santander, June 28, 1944

20539 Baccharis
20540 Vismia
20541 Myrsine
20542 Melastomaceae — 14 Km. S. of Socorro, Cordillera Oriental, Santander, June 28, 1944

20543 Compositae
20544 Leonotus — Pescadero, Rio Chicamocha, Cordillera Oriental, Santander, June 28, 1944.

20545 Tournefortia
20546 Tournefortia
20547 Moraceae
20548 Brickellia
20549 Adiantum — 3 Km. E. of Boca de Chucurí, Rio Sogamoso, Cordillera Oriental, Santander, June 29, 1944
20550 tree; lvs. alt.; fr. like acorn
20551 Psychotria
20552 Remijia pedunculata (with bark sample) — "Quina colorada", Filo de Lemir, La Putana, Cordillera de La Paz, Santander, July 6, 1944
20553 Remijia pedunculata — "Quina colorada" (with bark sample)
20554 Bromeliaceae — cascade of Quebrada Boquerona at confluence with Quebrada La Putana, Cordillera de La Paz, Santander, July 7, 1944.
20555 Isertia or Cassupa
20556 Rubiaceae
20557 Psychotria
20558 Lobeliaceae vine
20559 Gesneriaceae
20560 Palicourea
20561 Gentianaceae — W. side of Cordillera de La Paz, summit of Llana-Boquerona trail, Santander, July 7, 1944.
2 0562 tree lvs. opp. cor. — gam. Quebrada Llana, E. side Cordillera de La Paz, Santander, July 7, 1944.
20563 Cephaelis — near summit, W. side of Cordillera de La Paz, Quebrada Boquerona, Santander July 7, 1944.

20564 Sphagnum
20565 Acanthaceae
20566 Remijia pedunculata (with bark sample) — "Quinon" Finca Maravilla, Las Cruces, 3 Km. E. of San Vicente de Chucurí, Cuchilla del Ramo, Santander, H. St. John & Damaso Ramirez, July 5, 1944
2 0567 Remijia pedunculata (with bark sample) — "Quina roja" Alto de Consuelo, Cordillera de La Paz, Santander, H. St. John & Gustavo Arcila, July 19, 1944.
20568 Remijia pedunculata — "Quina roja" (with bark sample)
20569 Remijia pedunculata — "Quina roja" (with bark sample)
20570 Euphorbiaceae
20571 Ladenbergia — "Quinon"(with bark sample)
20572 Liliaceae — Filo Lorene, E. side of Cordillera de La Paz, Santander, H. St. John, July 20, 1944

20573 Pentagonia — Filo Lorene, E. side Cordillera e La Paz, Santander, H. St. John, July 20, 1944.

20574 Isertia or Cassupa (Bark sample) — Filo de Alto Viento, E. side Cordillera de La Paz, Santander, H. St. John & Gustavo Arcila, July 21, 1944

20575 Remijia pedunculata (Bark sample) — "Quina colorada" ridge between Filo de Alto Viento and Auebrada La Honda, E. side of Cordillera de La Paz, H. St. John & Gustavo Arcila, July 21, 1944

20576 Remijia pedunculata — "Quina colorada" (Bark sample)

20577 Palicourea — Filo de Alto Viento, E. side of Cordillera de La Paz, Santander, H. St. John July 21, 1944.

20578 Scrophulariaceae

20579 Cephaelis brachiata

20580 Gonzalagunia

20581 Rubiaceae

20582 Rubiaceae

20583 Psychotria

20584 Passiflora — Quebrada La [illegible] Llana, Nuevo Mundo, Cordillera Oriental, Santander July 25, 1944.

2 0585 Rubiaceae

20586 Gesneriaceae near Saint-Paulia

2 0587 Apocynaceae

20588 Vismia — "Manchador" Quebrada Angulo, 4 Km. S. of Lebrija, Cordillera Oriental, Santander, July 29, 1944

20589 Vismia

20590 Jussiaea

20591 Compositae Brickellia?

20592 Rubiaceae

20593 tree, superior ovary

20594 tree monoecious — "machanillo"

20595 Clusia — "gachi"

20596 Orchidaceae

20597 Separuna

20598 Melastomaceae

20599 Cephaelis

20600 Solanaceae

20601 Rubiaceae

2 0602 Piper — 4 Km. S. of Cantabria, Cordillera Oriental, Santander, July 29, 1944

20603 Solanum tree

20604 Melastomaceae shrub, páramo, 15 Km. W. of Berlin, Cordillera Oriental, Santander, July 30, 1944.

20605 Senecio

20606 Xyris

20607 Espeletia

20608 Begonia — páramo, 8 Km. E. of Berlin, Cordillera Oriental, Santander, July 30, 1944

20609 Calceolaria

20610 Viola

20611 Galium

20612 Gunnera

(3) 20501 Submerged in ditch in warm water, in ~~rubal Kaline~~ subalpine meadow, below hot spring. Podogynes fall with fruits. (2577 m. alt.)

(5) 20502 2 m. shrub; edge of thicket. lvs. below white velvety; stems white velvety; corolla white (455 m. alt)

(3) 20503 Herb 4-6 dm., in thicket. corolla blue, slightly irregular, tube deflexed and swollen. (455m alt.)

(6) 20504 Herb. to 1 m.; herbage viscid; corolla blue, slightly irregular. (455 m. alt.)

(5) 20505 2 m. shrub, edge of thicket. corolla pale blue; herbage velvety, lvs. above green, below white hairy. (455 m. alt.)

(5) 20506 2 m. shrub, lvs. above dark green, scabrous, impressed rugose, below green; fl. white, unpleasantly sweet, lobes rotate, slightly irregular; frt. depressed globose, greenish white. (455 m. alt.)

(6) 20507 Tree, 15 m. x 4 dm., bark brown, longit. fissured; lvs. above green, below whitish green, fl. yellowish (455.m. alt.)

(7) 20508 Tree, 8 m. x 3 dm., common in thickets. lvs. subcoriaceos, above dark shiny green, below ~~silvery~~ scaly; petals white. 460 m. alt.

(5) 20509 Tree, 8 m. x 3 dm., edge of thicket. fl. whitish, lvs. above shiny green, below pale green; 460 m. alt.

(7) 20510 2 m. shrub; common, edge of thicket. herbage velvety ♂ fl. whitish, lvs. chartaceous, thick, above green, below whitish green. ♀ fl. rare. 460 m. alt.

(5) 20511 shrub 3 - 6 dm. in thicket. lvs. subcoriaceous, above dark shiny green, below green; drupes bright red, juicy. 460 m. alt.

(7) 20512 5 km. s. of Ubaque. 2-3 m. shrub; leaflets above dark green, below pale green fl. bright yellow. 1900 m. alt.

(7) 20513 4 km. s. of Choachí. 2 m. shrub; roadside thicket. hairy white, leaflets above dark green, below pale green; petals pale yellow. alt. 2000 m.

(7) 20514 3 m. shrub, thicket in paramo; lvs. coriaceous, above dark shiny green, below pale green, bracts of inflorescence membranaceous, becoming pink; corolla tube pale reddish below, upper third and lobes green. 3200 m. alt.

(5) 20515 3 m. shrub, thicket in paramo; lvs. coriaceous, above dark shiny green, below pale green; calyx dark red, corolla tube red, throat and lobes pale red. 3200 m. alt.

(5) 20516 Tree, 6m. x 2dm.; Cult. at Instituto Biologico, Ciudad Universitaria. sap milky; fl. monoecious; fr. 1 dm. long with 5 deep furrows longit. 2600m.alt.

(5) 20517 ~~2 m. shrub, thicket common in this area, upper petals~~ thicket on hillside, 2m. shrub, calyx rose purple; 2 upper petals reflexed, purple. 2540 m. alt.

UNITED STATES DEPARTMENT OF AGRICULTURE
BUREAU OF PLANT INDUSTRY
WASHINGTON, D. C.

Division of
Plant Exploration and Introduction.

This acknowledges receipt of your report on experimental plants for which we thank you. Suggestions previously made, to assist you in preparing future reports, are repeated below.

Reports are desired, without special request, on all plants on which you have not previously reported fully; also on those that have materially progressed or deteriorated since your last report. However, reports are expected at the end of the first season only on those plants that have flowered or died or behaved in some unusual way; in other cases a report on any given plant need not be sent until the end of the second or third season of growth, or until the plant has grown sufficiently for the experimenter to form some opinion of its adaptability fo the environment and an idea of its probable usefulness.

The reports should always include the P. I. number and botanical name of each plant, the year in which received, number of plants living, their approximate size, a note on the flowering or fruiting and, when possible, an opinion of the value of the plant for the locality.

Plants that have died usually should be listed in a letter (rather than on a report form), with the cause of death indicated when known.

Some plants unidentified as to species are sent out by this division—the generic name only, followed by "sp." being given. When such plants first flower, a good pressed dried specimen, with leaves and flowers, should be prepared and sent to us, with introduction number and name attached and accompanied by a transmitting letter.

Additional blanks for use in preparing future reports on plants are enclosed. Please request more blanks when needed.

Very truly yours,

R. A. Young,
Associate Horticulturist.

(8) 20518 3m. shrub, petals deep blue but ~~yellow~~ keel yellow in ~~center~~ outer half. 2540m. alt.

Division of
Plant Exploration and Introduction

December 27, 1938.

To Experimenters Cooperating with the
Division of Plant Exploration and Introduction:

In view of the numerous misconceptions of experimenters as to what is expected by the Division of Plant Exploration and Introduction in the way of reports on plants that have been supplied for testing, it has become necessary to call attention to certain particulars. Although it has been stated repeatedly that experimenters are chosen because we believe them to be competent to grow experimental plants with skill and to report on their behavior with accuracy, the situation is generally unsatisfactory.

Several reports are expected, at intervals of from 1 to 3 years, on all plants that have been sent. Except when plants flower the first year, a first report ordinarily need not be sent until after the end of the second or third season of growth. If plants are successful, the degree and character of their success should be given in full. If plants are poor or die an immediate report by letter, enumerating the reasons for their failure, is expected. If any plants received have been propagated and disseminated, a full report on this is desired.

A few report blanks are enclosed herewith, together with a return envelope; additional blanks in desired quantity will be furnished upon request. While reports usually are preferred on these forms, they may be given in a letter when the experimenter so desires.

It is expected that all experimenters will be able to furnish adequate pressed specimens with proper numbers attached whenever requested. Complete pressed specimens should be sent when the experimenter requests the identification of an introduction or questions the identity of a plant he has received.

All experimenters are expected to furnish reports <u>without special request</u> from this Division. This is the basis of our cooperation, and failure to report will be considered sufficient reason for abandoning the cooperation.

B. Y. Morrison,
Principal Horticulturist in Charge,
Division of Plant Exploration and Introduction.

(7) 20562 Moist, subtropical forest. Tree 8 m. x 1 dm.; lvs. chartaceous; corolla orange; berry orange. Alt. 3500 m.

(3) 20563 Moist, subtropical forest. Shrub to 5 m.; bracts vermillion; corolla pale yellow; berries blue. Alt. 3900 m.

(1) 20564 Forming mats 2-4 dm. thick on moist, soft sandstone rocks, near summit. Alt. 4000 m.

(5) 20565 West subtropical forest. Shrub to 6 m.; stems weak, hollow, square, 4-winged; lvs. fleshy chartaceous; corolla pale yellowish, tube & lobes with 2 heavy magenta lines, ~~mxhmx~~ Other plants with corolla suffused with pale or deep rose/ color. Alt. 4000 m.

The quina only on the ridge of the E. crest above sandstone cliff. Grove exploited years ago by Evanjelista Ardilá, Pedro Navaro, et al.

UNITED STATES DEPARTMENT OF AGRICULTURE
BUREAU OF PLANT INDUSTRY
WASHINGTON, D. C.

Division of
Plant Exploration and Introduction

December 27, 1938.

To Experimenters Cooperating with the
Division of Plant Exploration and Introduction:

In view of the numerous misconceptions of experimenters as to what is expected by the Division of Plant Exploration and Introduction in the way of reports on plants that have been supplied for testing, it has become necessary to call attention to certain particulars. Although it has been stated repeatedly that experimenters are chosen because we believe them to be competent to grow experimental plants with skill and to report on their behavior with accuracy, the situation is generally unsatisfactory.

Several reports are expected, at intervals of from 1 to 3 years, on all plants that have been sent. Except when plants flower the first year, a first report ordinarily need not be sent until after the end of the second or third season of growth. If plants are successful, the degree and character of their success should be given in full. If plants are poor or die an immediate report by letter, enumerating the reasons for their failure, is expected. If any plants received have been propagated and disseminated, a full report on this is desired.

A few report blanks are enclosed herewith, together with a return envelope; additional blanks in desired quantity will be furnished upon request. While reports usually are preferred on these forms, they may be given in a letter when the experimenter so desires.

It is expected that all experimenters will be able to furnish adequate pressed specimens with proper numbers attached whenever requested. Complete pressed specimens should be sent when the experimenter requests the identification of an introduction or questions the identity of a plant he has received.

All experimenters are expected to furnish reports <u>without special request</u> from this Division. This is the basis of our cooperation, and failure to report will be considered sufficient reason for abandoning the cooperation.

B. Y. Morrison,
Principal Horticulturist in Charge,
Division of Plant Exploration and Introduction.

(4) 20590 Remnant of forest. 7 m. shrub, with long wand-like branches; calyx lobes red-dotted within, petals yellow. Alt. 3100 ft. 955 m.

(5) 20591 Thicket by stream. Vine on bushes; involucre green; pappus white. Alt. 3100 ft. 955 m.

(7) 20592 Thicket in gulch. Vine on bushes; lvs. chartaceous; fl. white, fading brown; calyx white; berry purple, 5-celled. Alt. 3100 ft. 955 m.

Division of Plant Exploration and Introduction:

In view of the numerous misconceptions of experimenters as to what is expected by the Division of Plant Exploration and Introduction in the way of reports on plants that have been supplied for testing, it has become necessary to call attention to certain particulars. Although it has been stated repeatedly that experimenters are chosen because we believe them to be competent to grow experimental plants with skill and to report on their behavior with accuracy, the situation is generally unsatisfactory.

Several reports are expected, at intervals of from 1 to 3 years, on all plants that have been sent. Except when plants flower the first year, a first report ordinarily need not be sent until after the end of the second or third season of growth. If plants are successful, the degree and character of their success should be given in full. If plants are poor or die an immediate report by letter, enumerating the reasons for their failure, is expected. If any plants received have been propagated and disseminated, a full report on this is desired.

A few report blanks are enclosed herewith, together with a return envelope; additional blanks in desired quantity will be furnished upon request. While reports usually are preferred on these forms, they may be given in a letter when the experimenter so desires.

It is expected that all experimenters will be able to furnish adequate pressed specimens with proper numbers attached whenever requested. Complete pressed specimens should be sent when the experimenter requests the identification of an introduction or questions the identity of a plant he has received.

All experimenters are expected to furnish reports <u>without special request</u> from this Division. This is the basis of our cooperation, and failure to report will be considered sufficient reason for abandoning the cooperation.

B. Y. Morrison,
Principal Horticulturist in Charge,
Division of Plant Exploration and Introduction.

UNITED STATES DEPARTMENT OF AGRICULTURE
BUREAU OF PLANT INDUSTRY
WASHINGTON, D. C.

Division of
Plant Exploration and Introduction

December 27, 1938.

To Experimenters Cooperating with the
Division of Plant Exploration and Introduction:

In view of the numerous misconceptions of experimenters as to what is expected by the Division of Plant Exploration and Introduction in the way of reports on plants that have been supplied for testing, it has become necessary to call attention to certain particulars. Although it has been stated repeatedly that experimenters are chosen because we believe them to be competent to grow experimental plants with skill and to report on their behavior with accuracy, the situation is generally unsatisfactory.

Several reports are expected, at intervals of from 1 to 3 years, on all plants that have been sent. Except when plants flower the first year, a first report ordinarily need not be sent until after the end of the second or third season of growth. If plants are successful, the degree and character of their success should be given in full. If plants are poor or die an immediate report by letter, enumerating the reasons for their failure, is expected. If any plants received have been propagated and disseminated, a full report on this is desired.

A few report blanks are enclosed herewith, together with a return envelope; additional blanks in desired quantity will be furnished upon request. While reports usually are preferred on these forms, they may be given in a letter when the experimenter so desires.

It is expected that all experimenters will be able to furnish adequate pressed specimens with proper numbers attached whenever requested. Complete pressed specimens should be sent when the experimenter requests the identification of an introduction or questions the identity of a plant he has received.

All experimenters are expected to furnish reports <u>without</u> <u>special request</u> from this Division. This is the basis of our cooperation, and failure to report will be considered sufficient reason for abandoning the cooperation.

B. Y. Morrison,
Principal Horticulturist in Charge,
Division of Plant Exploration and Introduction.

UNITED STATES DEPARTMENT OF AGRICULTURE
BUREAU OF PLANT INDUSTRY
WASHINGTON, D. C.

Division of
Plant Exploration and Introduction

December 27, 1938.

To Experimenters Cooperating with the
Division of Plant Exploration and Introduction:

In view of the numerous misconceptions of experimenters as to what is expected by the Division of Plant Exploration and Introduction in the way of reports on plants that have been supplied for testing, it has become necessary to call attention to certain particulars. Although it has been stated repeatedly that experimenters are chosen because we believe them to be competent to grow experimental plants with skill and to report on their behavior with accuracy, the situation is generally unsatisfactory.

Several reports are expected, at intervals of from 1 to 3 years, on all plants that have been sent. Except when plants flower the first year, a first report ordinarily need not be sent until after the end of the second or third season of growth. If plants are successful, the degree and character of their success should be given in full. If plants are poor or die an immediate report by letter, enumerating the reasons for their failure, is expected. If any plants received have been propagated and disseminated, a full report on this is desired.

A few report blanks are enclosed herewith, together with a return envelope; additional blanks in desired quantity will be furnished upon request. While reports usually are preferred on these forms, they may be given in a letter when the experimenter so desires.

It is expected that all experimenters will be able to furnish adequate pressed specimens with proper numbers attached whenever requested. Complete pressed specimens should be sent when the experimenter requests the identification of an introduction or questions the identity of a plant he has received.

All experimenters are expected to furnish reports <u>without special request</u> from this Division. This is the basis of our cooperation, and failure to report will be considered sufficient reason for abandoning the cooperation.

B. Y. Morrison,
Principal Horticulturist in Charge,
Division of Plant Exploration and Introduction.

very ~~xxxxx~~ sparse; lvs. chartaceous; perianth largely brownish red, or in part yellowish; anthers pale yellow; ovary glaucous greenish; stigmas brownish. Alt. 6800 ft. 2090

(7) 20817 Mossy, ~~xixxx~~ cloud land. Herb, stems fleshy, trailing, assurgent, buds orange; corolla yellow except for white base; berries white. Alt. 10600 ft. 3320

(8) 20818 "la nudo"
Remnant of forest along stream. Tree 8 m. x 2 dm.; corolla yellow. Alt. 10300 ft. 3230

(9) 20819 "chusco"
Woods by stream. Very ~~xxx~~ abundant; stems ~~x~~ arching to 8 m. long. Alt. 10300 ft. 3230

(3) 20820 Remnant of forest by stream. Epiphytic on mossy tree trunk; stems branching dichotomously; fl. greenish yellow; sepals slightly brownish tinged without. Alt. 10750 ft. 3365

(9) 20821 "ragué","campaño silvestre"
~~xixx~~ Forest remnant on steep slope. Tree 8 m. x 5 dm.;~~xx~~ sepals & petals rose-colored; fr. green, then brown. Alt. 11100 ft. 3475

(4) 20822 Mossy, cloud forest. Half climbing herb, 1-4 m. long; lvs. sub-carnose, impressed nerved above. Alt. 11700 ft. 3660

(6) 20823 "yerba mora"
Edge of virgin forest. Corolla white; fruits elliptic. Tubers not found. Alt. 11700 ft. 3660

(7) 20824 Thicket by stream. Wings blue with slightly darker veins; keel invisible, ~~xx~~ covered by the wings; ~~xxx~~ body whitish, subulate ~~xipx~~ tip blackish; in young fl. upper half of standard white with yellow blotch at center; upper half in older fls. rose magenta, lower half blue with darker veins; tip of standard raised at 45° to wings. Alt. 7350 ft. 2275

(4) 20825 Thicket on mountainside. 4 m. shrub, sap milky; infl. purplish red. pubescent; calyx purplish red, at base greenish; petals without purplish red, within paler to greenish. Alt. 10900 ft. 3415

(4) 20826 Thicket by stream. Young tree, white ~~xxix~~ hispid; sepals greenish white; petals white. Alt. 4750 ft. 1460

(11) 20827 "papayeulo"
Cult. on steep, dry, subtropical slope with Musa, Saccharum, Carica papaya, Manihot util., etc.
Stem 7 m. x 8 cm., without milky sap except for ~~x~~ few ~~xxxx~~ droplets in terminal bud; lvs. with segments chanelled; petioles, veins & veinlets ~~xxxxx~~ magenta; fr. pale yellow, magenta tinged, 12.5 cm. long x 5-6 cm. diam., with ~~x~~ blunt longit. ridges and 5 flat ridges. Flesh with taste of mild acid~~x~~ apple, pulp around seeds milder and more pleasant. Natives use flesh of fr. with sugar as a ~~xxxx~~ dessert. petals green on red disk at base, tips yellowish. ~~Only~~ This tree with female fl. only, no trace of stamens; Alt. 5100 ft. 1590

(6) 20893 "manzano"
Upper forest. Tree 7 m. x 1 dm.; fr. white or pinkish, subcarnose, turning brown and shrinking on drying; endocarp crimson. Alt. 11500 ft. 3600 m.

(5) 20894 Elfin forest. Epiphyte on mossy branch; perianth white; stem fleshy, leaves coriaceous, 2-ranked. Alt. 11800 ft. 3690 m.

(4) 20895 Shrub 5 m. tall; lvs. subcoriaceous; fl. white. Alt. 11800 ft. 3690 m.

(11) 20896 "cenizo"
Upper elfin forest. Small, round-topped tree 6 m. x 2 dm.; lvs. subcoriaceous, shiny above, below tawny hairs; fl. yellow. Alt. 11800 ft. 3690 m.

(4) 20897 Marshy páramo. Lvs. fleshy; calyx and corolla magenta. Alt. 12000 ft. 3750 m.

(3) 20898 In páramo. Abundant; lvs. tawny hairs; fl. yellow. Alt. 12400 ft. 3870 m.

(7) 20899 Uppermost elfin forest. Round-topped tree 5 m. x 2 dm.; lvs. subcoriaceous; fl. white. Alt. 12300 ft. 3840 m.

(7) 20900 Upper elfin forest. Vine climbing and pendent; lvs. chartaceous; fl. deep rose-color, anthers lead-color. Alt. 11000 ft. 3475 m.

UNITED STATES DEPARTMENT OF AGRICULTURE
BUREAU OF PLANT INDUSTRY
WASHINGTON, D. C.

Division of
Plant Exploration and Introduction

December 27, 1938.

To Experimenters Cooperating with the
Division of Plant Exploration and Introduction:

In view of the numerous misconceptions of experimenters as to what is expected by the Division of Plant Exploration and Introduction in the way of reports on plants that have been supplied for testing, it has become necessary to call attention to certain particulars. Although it has been stated repeatedly that experimenters are chosen because we believe them to be competent to grow experimental plants with skill and to report on their behavior with accuracy, the situation is generally unsatisfactory.

Several reports are expected, at intervals of from 1 to 3 years, on all plants that have been sent. Except when plants flower the first year, a first report ordinarily need not be sent until after the end of the second or third season of growth. If plants are successful, the degree and character of their success should be given in full. If plants are poor or die an immediate report by letter, enumerating the reasons for their failure, is expected. If any plants received have been propagated and disseminated, a full report on this is desired.

A few report blanks are enclosed herewith, together with a return envelope; additional blanks in desired quantity will be furnished upon request. While reports usually are preferred on these forms, they may be given in a letter when the experimenter so desires.

It is expected that all experimenters will be able to furnish adequate pressed specimens with proper numbers attached whenever requested. Complete pressed specimens should be sent when the experimenter requests the identification of an introduction or questions the identity of a plant he has received.

All experimenters are expected to furnish reports <u>without special request</u> from this Division. This is the basis of our cooperation, and failure to report will be considered sufficient reason for abandoning the cooperation.

B. Y. Morrison,
Principal Horticulturist in Charge,
Division of Plant Exploration and Introduction.

20543 ~~Compositae~~
20544 Leonotus — Pescadero, Rio Chicamocha, Cordillera Oriental, Santander, June 28, 1944.

20545 Tournefortia
20546 Tournefortia
20547 ~~Moraceae~~
20548 Brickellia
20549 Adiantum — 3 Km. E. of Boca de Chucurí, Rio Sogamoso, Cordillera Oriental, Santander, June 29, 1944

20550 tree; lvs. alt.; fr. like acorn
20551 Psychotria
20552 Remijia pedunculata (with bark sample) — "Quina colorada", Filo de Lemir, La Putana, Cordillera de La Paz, Santander, July 6, 1944
20553 Remijia pedunculata — "Quina colorada" (with bark sample)
20554 ~~Bromeliaceae~~ — cascade of Quebrada Boquerona at confluence with Quebrada La Putana, Cordillera de La Paz, Santander, July 7, 1944.

20555 Isertia ~~or Cassupa~~
20556 ~~Rubiaceae~~
20557 Psychotria
20558 ~~Lobeliaceae~~ vine
20559 ~~Gesneriaceae~~
20560 Palicourea
20561 ~~Gentianaceae~~ — W. side of Cordillera de La Paz, summit of Llana-Boquerona trail, Santander, July 7, 1944.
2 0562 tree lvs. opp. cor. gam. — Quebrada Llana, E. side Cordillera de La Paz, Santander, July 7, 1944.
20563 Cephaelis — near summit, W. side of Cordillera de La Paz, Quebrada Boquerona, Santander July 7, 1944.

20564 Sphagnum
20565 ~~Acanthaceae~~
20566 Remijia pedunculata (with bark sample) — "Quinon" Finca Maravilla, Las Cruces, 3 Km. E. of San Vicente de Chucurí, Cuchilla del Ramo, Santander, H. St. John & Damaso Ramirez, July 5, 1944
2 0567 Remijia pedunculata (with bark sample) — "Quina roja" Alto de Consuelo, Cordillera de La Paz, Santander, H. St. John & Gustavo Arcila, July 19, 1944.
20568 Remijia pedunculata — "Quina roja" (with bark sample)
20569 Remijia pedunculata — "Quina roja" (with bark sample)
20570 ~~Euphorbiaceae~~
20571 Ladenbergia — "Quinon"(with bark sample)
20572 ~~Liliaceae~~ — Filo Lorene, E. side of Cordillera de La Paz, Santander, H. St. John, July 20, 1944

note on coll. sheet

20573 Pentagonia — Filo Lorene, E. side Cordillera e La Paz, Santander, H. St. John, July 20, 1944.
20574 Isertia or ~~Cassupa~~ (Bark sample) — Filo de Alto Viento, E. side Cordillera de La Paz, Santander, H. St. John & Gustavo Arcila, July 21, 1944
20575 Remijia pedunculata (Bark sample) — "Quina colorada" ridge between Filo de Alto Viento and Auebrada La Honda, E. side of Cordillera de La Paz, H. St. John & Gustavo Arcila, July 21, 1944
20576 Remijia pedunculata — "Quina colorada" (Bark sample)
20577 Palicoures — Filo de Alto Viento, E. side of Cordillera de La Paz, Santander, H. St. John July 21, 1944.
20578 Scrophulariaceae
20579 Cephaelis brachiata
20580 Gonzalagunia
20581 Rubiaceae
20582 Rubiaceae
20583 Psychotria
20584 Passiflora — Quebrada La Llana, Nuevo Mundo, Cordillera Oriental, Santander July 25, 1944.
2 0585 Rubiaceae
20586 Gesneriaceae near Saint-Paulia
2 0587 Apocynaceae
20588 Vismia — "Manchador" Quebrada Ángulo, 4 Km. S. of Lebrija, Cordillera Oriental, Santander, July 29, 1944
20589 Vismia
20590 Jussiaea
20591 Compositae Brickellia?
20592 Rubiaceae
20593 tree, superior ovary
20594 tree monoecious — "machanillo"
20595 Clusia — "gachi"
20596 Orchidaceae
20597 Saparuna
20598 Melastomaceae
20599 Cephaelis
20600 Solanaceae
20601 Rubiaceae
2 0602 Piper — 4 Km. S. of Cantabria, Cordillera Oriental, Santander, July 29, 1944
20603 Solanum tree
20604 Melastomaceae shrub, páramo, 15 Km. W. of Berlin, Cordillera Oriental, Santander, July 30, 1944.
20605 Senecio
20606 Xyris
20607 Espeletia
20608 Begonia — páramo, 8 Km. E. of Berlin, Cordillera Oriental, Santander, July 30, 1944
20609 Calceolaria
20610 Viola
20611 Galium
20612 Gunnera
20613 Siphocampylus Funckeanus Planch., vel affin. det. R. McVaugh

20613 Lobeliaceae subparamo, subparamo, 5 Km. E. of ---- -
20614 Calycophyllum hirsutus "Quinon" ridge S. E. of Esmeralda, S.side of Rio Sogamoso, Cordillera de La Paz, Santander, H. St. John & G. Arcila Aug. 2, 1944
20615 Remijia pedunculata "Quina blanca" (Bark sample)
20616 Remijia pedunculata "Quina blanca" (Bark sample)
20617 Remijia pedunculata "Quina blanca" (Bark sample) W. side of main ridge, Cordillera de La Paz, S. side of Rio Sogamoso, Santander, H. St. John & G. Arcila July 2, 1944.
20618 Remijia pedunculata "Quina blanca" (Bark sample)
20619 Remijia pedunculata "Quina blanca" (Bark sample) N. W. end of Cordillera de La Paz, S. of Rio Sogamoso, Santander, H. St. John & G. Arcila Aug. 2, 1944
20620 Remijia pedunculata "Quina blanca" (Bark sample)
20621 Remijia pedunculata "Quina blanca" (Bark sample) W. side of N. end of Cordillera de La Paz, S. side of Rio Sogamoso, S. E. of Esmeralda, Santander, H. St. John & G. Arcila, Aug. 3, 1944.
20622 Remijia pedunculata mass collection of sterile branches of 20621
206223 Remijia pedunculata mass collection of flowers of 20621
20624 Remijia pedunculata mass collections of fruit of 20621
20625 Remijia pedunculata "Quina blanca" (Bark sample)
20626 Remijia pedunculata "Quina blanca" (Bark sample)
20627 Remijia pedunculata "Quina blanca" (Bark sample) Filo San Pablo, S. end of N. part of Cordillera de La Paz, E. of Esmeralda, Santander, H. St. John & G. Arcila, Aug. 4, 1944
20628 Remijia pedunculata "Quina blanca" (Bark sample)
20629 Remijia pedunculata "Quina blanca" (Bark sample)
